If anyone has the original issue, please PM me and I can then update the original discussion thread. I thought I had the first entry, but it was a discussion thread I put up a few days before we left. I've since found that I was wrong and the original issue is still on-going. If anyone has the original issue, please PM me and I can then update the original discussion thread. As far as I'm concerned, I'm not wasting my time on it. It's a known issue, and I know it was brought to their attention.Clinical and Molecular Characteristics of Two Novel Mutations in the CRB1 Gene in Iranian Families with Autosomal Dominant Retinitis Pigmentosa. To report the clinical and molecular findings of two families with autosomal dominant retinitis pigmentosa (adRP). The full-field electroretinogram (ERG) of both patients and family members, and mitochondrial DNA sequencing were performed. In addition, four different computational algorithms were used for pathogenic mutation prediction. Two unrelated Iranian families with adRP were investigated. We found two novel pathogenic mutations in the CRB1 gene. Both patients showed autosomal dominant inheritance. The first patient was a 45-year-old man who presented with night blindness. The second patient was a 40-year-old woman who had progressive visual loss since age 16. The ERG showed characteristic results for adRP. Our findings indicate
