This is a test version of the Benchmark Tool. The Benchmark Tool makes use of a Java VM which is capable of executing common benchmark tasks. What to do with a Tool? The Benchmark Tool helps to check the stability of the VM under test. The Benchmark Tool can be used in the Java VM to evaluate the feasibility of executing certain benchmark tasks. The Benchmark Tool provides a few standard benchmark tasks. These are: Ping to Google. Ping to a local IP address. HTTP GET to a web page. HTTP POST to a web page. HTTP CONNECT to a web page. Http Head (get, put). Simple connect/disconnect test. The Benchmark Tool will record the elapsed time for each task. A graphical display of the recorded times will be displayed. The Benchmark Tool also displays the start and end times for each benchmark. The Benchmark Tool prints out results in a report. The Benchmark Tool does not take care of general result formatting. In other words, it prints results as they are received from the VM. The Benchmark Tool also does not give any result indication when the elapsed time exceeds a specific threshold. On a technical note: the Benchmark Tool can be configured to support a wide range of hardware and software platforms. Detailed Usage The Benchmark Tool can be used in the following way. Create Benchmark Run A Benchmark Run is started by invoking the Benchmark Tool from a desktop application. The Benchmark Tool can be configured to start up a Run after a specified elapsed time. The Benchmark Tool can be configured to start up a Run at a specified time of day. The Benchmark Tool can be configured to start up a Run at a specified date. The Benchmark Tool can be configured to start up a Run at a specified year. The Benchmark Tool can be configured to start up a Run at a specified month. The Benchmark Tool can be configured to start up a Run at a specified weekday. The Benchmark Tool can be configured to start up a Run at a specified minute. The 2d92ce491b
